(54) NETWORK

(57)Abstract:

PURPOSE: To reduce loads put on a master computer and the signal lines of a network in the network provided with plural terminals for requesting processing, plural servers (computers) for executing the processing and the master computer for allocating the requested processing to the respective servers.

CONSTITUTION: The server whose load amount is smaller than a threshold value monitors what kind of processings the master computer 1 issues to the other servers by a master monitoring part 14. In the case of the processing executable by itself as well, a request packet informing the master computer 1 of that purport is sent to the master computer 1. That is, the server with remaining power is made to spontaneously report. The master computer 1 refers to a processing reception ability list 9 prepared based on the report and decides the servers for allocating the processings of the next time.

LEGAL STATUS

[Date of request for examination] 03.09.1999

[Date of sending the examiner's decision of rejection] 09.10.2001

[Kind of final disposal of application other than

the examiner's decision of rejection or
application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's
decision of rejection]

[Date of requesting appeal against examiner's
decision of rejection]

[Date of extinction of right]
